**Technology Services:** In an era when business owners have an unprecedented level of access to technology and tech-based services, it can sometimes be difficult to remain fully informed on the capabilities of the hardware and software being deployed within their enterprise. We provide our clients with a wide range of technology and consulting services, ranging from server related issues, such as migration planning and virtualization, to other aspects of modern IT, including IT security and hosting / cloud services.

**Managed Services:** When you are running a business, it becomes even more difficult to find the time needed to oversee IT Services, which may not be seen as core to your business. In situations where organisations are unable to hire a full IT support team for onsite or remote maintenance and managed services, WANEANTA can be your one stop shop catering to all your IT Managed Services needs.

**Open Source and Open Standards:** In our quest to provide the best available techno-commercial solution for our customers, we make sure that the components of our solution use Open Standards and/or Open Source. Open Standards help the different components of our solutions work seamlessly together and integrate easily into your infrastructure while Open Source helps tap into the tools, skills and capabilities, the Open Source community has made available for all to use and build further on. Solutions based on Open Source and Open Standards provide our customers with the lowest total cost of ownership and a hassle free experience throughout the life of the solution.

From an Open Source stand point, we have skills on the LAMP (Linux, Apache, MySQL and PHP) stack, Zimbra, KVM and Nagios, while from an Open Standards perspective, what we ensure is that and adhere to the required interoperability protocols.

**Security:** We approach all our solutions with a security built-in philosophy. WANEANTA also offers our customers solutions cutting across all aspects of IT security, be it around perimeter security, identity and access management, data protection, application security, unified endpoint management or security identification and event management.

## PARTNERS

To ensure that we provide the best solution of highest quality, we partner with the world's best companies for IT Infrastructure products and solutions.
